SMART PITCH AND YAW SOLUTIONS FOR WIND TURBINES
SOLUTIONS FOR WIND TURBINES

Harvesting is as old as mankind and is the foundation for our survival. Mother earth is so kind donating us the WIND as a powerful energy and she allows us to use it. In respect for future generations, we are asked to save natural resources, and so it is noble to harvest energy out of this wind. Windmills have been used over centuries to mill flour or pump water. Today wind turbines are used to produce electrical energy. As wind is not blowing with a constant speed and direction, it is important to constantly adapt the angle of the blade and turn the rotor into the wind. This makes a maximum power tracking possible and produces as much energy as possible.

On the other hand, it is necessary to produce electricity with the lowest losses. Highly efficient solutions are necessary for fast amortization and best revenue. In addition it is also necessary to consider malfunctions and so to avoid damages or destruction of the turbine.

KEB, with its 30 years of experience in design and production of frequency inverters for most challenging applications, has designed robust drives, motors and brakes for the different movements inside the wind turbine. Proud of its 50,000 inverters installed in turbines around the world, KEB has launched the COMBIVERT P6, a flexible, reliable and easy to use ‘all in one solution’ for pitch control and the COMBIVERT H6 for yaw control. This solution is from users’ perspective freely programmable and finds its application on-, near- and off-shore. Various bus communication protocols allow the drives to be connected to most turbine controllers.

OPEN SOLUTION
- various fieldbus systems without gateway
- various encoder inputs on board
- PLC programming according to IEC 61131 standard
- for AC induction, synchronous and DC pitch motor
- for retrofit applications, the internal PLC can emulate older drives

LOCAL ADDED VALUE
- core components supplied by KEB
- local cabinet manufacturing
- simple mechanical integration
- cost savings
**FUNCTIONAL SAFETY**

- pitch drive with PL d according to EN ISO 13849
- yaw drive with STO and SBC
- certified by TÜV Rheinland
- Functional Safety is independent of the customer PLC program

**FREELY PROGRAMMABLE**

- own pitch algorithms with own know-how
- maximization of energy yield
- reduction of fatigue loads
- increase of availability of the turbine by implementing suitable reactions for each condition
- basic condition monitoring of relevant pitch system components
- for well-fitting service support
- differentiation from competitors
- know-how copy protection available

**ALL IN ONE**

- pitch inverter, backup charger, monitoring and PLC in one unit
- yaw inverter based on compact multi-axes system with integrated PLC
- reduced number of components
- compact cabinet
- clear cabinet layout, less wiring
SOFTWARE PACKAGES AS REQUIRED

The P6 internal PLC can be programmed as needed. It comes with a Basic Library for all basic tasks, and the customer can program everything he needs on his own.

Or the P6 can be complemented with the Extended Pitch Library, which contains pre-defined function blocks for typical tasks of a pitch system. So the customer just needs to program the interface specific to the turbine.

Or the KEB experts can write a Customer-Specific Program for the pitch drive according to the customer's specification.

INVERTER + BASIC LIBRARY

- Speed control / Position control
- Homing of motor encoder and blade encoder
- Charging circuit control (setpoint value and actual value)
- Temperature measurements
- Communication check
- Mains failure detection and phase loss detection
- Sample program
- Visualization samples
- Fan test program

EXTENDED PITCH LIBRARY

- Smooth filtering of setpoints
- Plausibility check of encoders
- Monitoring of motor status and motor cable
- Monitoring of ultracapacitors and lead batteries
- Controlled discharge of ultracapacitors (for service)
- Secondary LVRT response
- Automatic adjustment of fieldbus and IP address
- Function test program
- (brake, inverter, motor)
- Data logger, event-triggered

CUSTOMER-SPECIFIC PROGRAM

- Customized pitch algorithm to
  - improve performance and maximize energy yield
  - reduce fatigue loads on mechanical components
- Pitch state machine
  - Selection of Manual/Automatic operation
  - Selection of speed/positioning control
- Processing of digital inputs / outputs
- Response to limit switches
- Plausibility check of limit switches
- Processing of field bus data
- Specific reactions on warnings and errors to increase the availability of the turbine
- Additional conditions that trigger a safety run
- Additional visualizations for service personnel
- Basic condition monitoring of relevant pitch system components
- Control of auxiliaries (grease pump, cabinet heater and fan)

No matter who does the programming: The know-how of the customer program can be protected against third-party access by using password protection, compiled libraries and encryption.

HIGHLIGHTS

- specific software libraries available
- programming support
- flexible solution for customer add-ons
VARIOUS SIZES

The P6 hardware is available in two electrical sizes for AC and for DC motors, suitable for pitch systems of 1 ... 8 MW wind turbines.

### INVERTER SIZE 18 19 19 DC

- **I/O's**
  - 16 digital inputs incl. safety run input
  - 9 digital outputs
    - 1 relay output
    - 2 analog inputs
    - 4 Pt100 inputs
    - 24 V DC supply
  - CANopen
  - PROFIBUS
  - EtherCAT
  - PROFINET
- **Fieldbus**
- **External braking resistor**
- **2 Encoder inputs**
- **Shield connection rail (option)**
- **Motor output**

- **Mains input**
- **Heater input**
- **LED's**
- **Address selector switch**
- **Diagnostic interface COMBIVIS**
- **24 V brake**
- **Motor temperature sensor**
- **150...300 V brake (option)**
- **Ultracaps / batteries terminals**
EASY INTEGRATION OF P6 INTO THE SYSTEM

Typically, KEB supplies the core components of the pitch system, as marked in red. The customer makes the cabinet construction and manufactures the cabinet locally; this increases the value added locally. Thus, the mechanical integration of the pitch cabinet into the nacelle is achieved easily, while the electrical integration into the system is simple due to using the P6.

By using the highly integrated KEB P6, just very few components are needed externally in the cabinet.
**CONTROLLED YAW SOLUTIONS**

**NON-REDUNDANT SYSTEMS**

For the yaw drive of wind turbines, KEB can provide different yaw solutions. They all contain:
- smooth movement of the nacelle
- torque sharing
- reduction of mechanical load
- reduction of wear of the material.

Depending on the system configuration, the pitch drive controllers can also:
- tense up the drives against each other
- use the electrical motor brakes instead of a hydraulic brake
- add STO for the safety of service personnel during service operations.

**REDUNDANT SYSTEMS**

Used with a multiple inverter solution, the KEB Yaw Library PLC software ensures:
- improved torque sharing
- monitoring and protection of motors, cables and gearboxes
- redundant operation, even if one drive is not operational
- increased availability, especially for offshore turbines.

This can be implemented by adding turbine-specific enhancements to the pre-programmed IEC 61131 function blocks.

**HIGHLIGHTS**
- smooth movement of the nacelle
- reduction of wear
- increased availability
**SINGLE INVERTER**

- 3~ 400 V AC
- 24 V DC

**DOUBLE INVERTER**

- 3~ 400 V AC
- 24 V DC

**DISCRETE MULTIPLE INVERTER**

- 3~ 400 V AC
- 24 V DC
- Bus

**COMPACT MULTIPLE INVERTER**

- 3~ 400 V AC
- 500 V DC bus
- 24 V DC bus
- EtherCAT

Fieldbus to turbine controller

<sup>1</sup> depending on inverter type
Programming and diagnostic tools optimized for this application reduce engineering efforts.

**KEB COMBIVIS 6**
- Diagnostic tool for the pitch inverter P6 and for yaw drives
- Display of operating conditions
- Oscilloscope function
- Download of customized adjustments
- Analysis of communication between drive and control

**PROGRAMMING WITH KEB COMBIVIS STUDIO 6**
- CoDeSys based on IEC 61131-3
- Programming language: ST, IL, SFC, LD and FBD/CFC
- Integrated visualisation
- Simulation
- Debugging and file-management
WEB SERVER

a functionality can be integrated in the pitch drive as well as in the control unit for the yaw control

Advantages:
- No specific software is required
- A simple browser installed on a device can connect to the KEB products
- Password levels provides access to different information
- With KEB FTP tool, project documentations can be stored inside the memory and uploaded on site

HIGHLIGHTS

- Remote monitoring using Ethernet-based router
- Worldwide support from several server locations
- Also available as router with integrated 2G/3G/3G+ modem
- Access to remote devices via Ethernet or serial interface
- Proven COMBIVIS connect software connects the plant to be monitored to your workplace via VPN
- Additional HMI functionality for datalogging, long-term machine diagnostics and notification by e-mail and SMS
POWERFUL, EFFICIENT AND EXCESSIVELY RELIABLE

The KEB Pitch Motors are available for various wind turbines in the power range up to 10 MW. The high dynamic, vibration resistant servo motors are equipped with a robust encoder system and with the KEB fail-safe brake.

The high protection degree IP65 as well as the special corrosion painting allow using the KEB Pitch Motors in various climate conditions. If it is offshore or CCV / HCV – the KEB Pitch Motors guarantees safe and reliable operation. The dedicated housing design allows operation without additional forced ventilation.

PLUG AND DRIVE

KEB offers pre-assembled motor and feedback cables with very robust and easy-to-handle connector systems.

HIGHLIGHTS

- Vibration resistant
- HCV / CCV resistant
- Offshore operation, IP65
- Corrosion protection category C4M according to DIN EN ISO 12944-5
- Integrated holding brake, 24 V DC or 150 - 300 V DC with energy saving function
- Unique connector design with integrated power, encoder, brake and temperature sensor connectors
TWO BRAKE DESIGNS, OPTIMIZED FOR APPLICATIONS WITH HIGH DEMANDS ON THE PROTECTION DEGREE

HIGHLIGHTS

- More than 300,000 pitch and yaw brakes successful in operation
- HCV / CCV version available
- Rated voltage up to 300 VDC
- High vibration resistance (safety and lifetime)
- Coated and redundant springs with long lifetime for safe power-off stop
- Special friction lining for high emergency stop energy
- ≥ 200 Nm special anti-condensation and anti-icing design
- Low energy and low coil temperature rise system
SHIELD CONNECTION RAIL
- Adapted to P6 drive
- Compatible with usual spring-type shield connection clamps
- Large shield contact for high EMC suppression

INPUT CHOKE
- Smoothes the input current (THD < 40%)
- Reduces high current peaks on sliprings
- Protects the drive against high dV/dt from the supply

EXTERNAL BRAKING RESISTOR
- Increases the braking capacity of the drive
- Provided with overtemperature switch

THD FILTER
- Solutions for THDi reduction (<8%)
- Reduces high current peaks on sliprings
- Protects the drive against high dV/dt from the supply
- Conforms to
  - EN 61000-3-2
  - EN 61000-3-4
  - EN 61000-3-12
  - IEEE 519 – 1992
  - GS/4 (GB)
  - AS 2279 (Australia)
  - COP supply rules (Hong Kong)
- Low leakage EMC filters compatible with RCD’s type B/B+ for people and fire protection
KEB - OTHER DRIVES FOR WIND TURBINES

**Auxiliary Drives for Pumps, Fans and Air Conditioning**

**Lift and Hoist Drives and Brakes**

**Inverter for Servo Pump of Hydraulic Pitch System**

**C6 Router for Remote Monitoring**

**C6 HMI**
