

Baoding Furuike Special Ceramic Products Manufacture Co., Ltd.

Baoding Furuike Special Ceramic Products Manufacture Co., Ltd. (original Baoding Win-Win Compound Material Co., Ltd.) is a professional company which researches and manufactures high performance frictional materials. The water-lubrication bearing materials and the wind-driven generator brake materials which are researched & developed by our company have reached the leading level in the domestic field.

We have three department: Production technical department, Quality management department and Comprehensive Department. We have 40 employees, including 3 employees for R&D, all of them are Bachelor degree or above, they had work for friction material area about 10 years; 3 employees for manufacturing management, all of them are college degree and above; 2 employee are workers technician and others are shop workers.

We have researched and developed wind-driven generator brake materials since 2002. We have successively manufactured SYSC-1 testers for simulating minor inertial brakes, SYTJ-2 scaffolding testers for simulating high-speed axis brakes, and SYTJ-3 testers for simulating off-course friction on wind-driven generators. Those 3 testers can simulate real working conditions, and provide excellent test measures for researching and developing wind-driven generator's friction materials. Also we can provide the test report.

The high-speed axis wind-driven generator brake materials which are researched and developed by our company have been tested by foreign manufacturers and technical specifications has been consistent with MD550 from MIBA Corporation. Our off-course friction lining products which we are researching will be launched to the market soon.

Our company adheres to "Integrity & win-win" principle and "Scientific and Technological innovation" tenet, and integrates research, production and sale into a modernized S&T enterprise. With scientific management, powerful technical strength and perfect examine equipment our products have a good market. We sincerely hope to cooperate with clients from all over the world on the basis of mutual benefits.
