

Since 1970 Centa provides solutions to difficult drive and torsional vibration problems on industry and marine applications.

CENTA is the specialist on flexible couplings, offering a complete variety of couplings.

The great flexibility to vibrations and shocks, the acceptance of considerable misalignment, the transmission of torque without metal to metal contact.

Excellent noise damping and electrical insulating properties are some of the main characteristics of CENTA couplings that make them truly competitive.

With reference lists exceeding 10 million coupling installations, the international CENTA Group is one of the leading manufacturers of advanced flexible power transmission components
