## **702 Research Institute Of The First Academy Of China Aerospace Science & Technology Corporation**

### **Profile**

702 Research Institute Of The First Academy Of China Aerospace Science & Technology Corporation is the research center of structural strength, environmental and reliability engineering, which sets up strength, environmental and reliability tests for China's various types rockets and national defense equipments and serves as the key

laboratory of reliability , national defense environmental engineering science & technology, center of China aerospace environmental testing ,as well as the backing company of the storage and life assessment for China aerospace acceleration. Equipped with three high-tech enterprises, Beijing Aerostanard New Technology Company, ETS Solutions (Beijing) Ltd. Tianjin Relia Technology Co.Ltd., metal vibration reduction, sensor technology, converters, vibration tables, environmental test chambers, data acquisition ,kinetic data transmission analysis software, industrial automation and other product lines have been developed through the five specialized technical fields which are structural static strength, structural thermal strength, structural dynamics, environmental and reliability engineering.
