Jiangsu Blue Aspirations Technology Co., Ltd. is a high-tech innovative enterprise, committed to providing domestic and foreign customers with fully independent research and development production of renewable energy. We will continuously present the most advanced and reliable technologies, products and services in the application fields of weather monitoring, data communication, smart wind farm and intelligent grid. Currently, the main product is Floating Lidar System, which has a number of national patents and Copyrights including the core motion compensation algorithm, and has obtained the certification report of the international authority DNVGL data analysis. Based on data accuracy, system reliability and buoy safety, which are the three values that industry customers are most concerned about, we provide guarantee for wind resource assessment in the early stage of offshore wind power construction and power curve verification in the later stage. Up to now, already got a few orders from PowerChina and CEEC, as well as developers and turbine manufactures.
